## **Reasons for its early termination**

Many activities were not completed because key problems in the development of the building were encountered leading to an unfeasible execution of the project. One of the main particularities of this LIFE+ project was the fact that its progress was linked to the construction of a building, which was outside of the technical and economical scope of the LIFE+ project and whose promoter was BFC, one of the associated beneficiaries of the project.

The progress of the LIFE+ implementation activities was very low, awaiting that the building and the associated infrastructure was already built. Therefore, some key activities were not finalized. Since the presentation of the last Progress Report (from 31/05/2016 until the reporting of the letter to finalize the project) there was no noteworthy progress by the promotor/developer, thus complicating, if it is possible, the situation further.

TSK and its partners considered the execution of this Project unfeasible given the work pending and the remaining timeframe (even considering the granted time extension) and requested by means of a letter information that states the following steps necessary to carry out the termination of the LIFE11 ENV/ES/622 reference project.
